# AN AUTOMATED APPROACH.....

## Mediwell Systems Ltd

**Dedicated to supplying cost effective and efficient inventory management solutions to the medical sector and affiliated divisions. Mediwell has the focus to assist all those who strive to achieve a world class lean procurement process.**

**We have over 50 UK locations which can provide responsive and proficient support from project meetings and full training programs to emergency support and scheduled maintenance.**

**Incorporating our knowledge and expertise coupled with customer objectives we are able to provide a tailored solution from our portfolio of products at a cost effective price.**

### Reduce Inventory

**MEDI-365's advanced and flexible software allows for a lean logistical process controlling both medicines and supplies. Tailoring ward specific stock lists to patients demands eliminates unnecessary excess stock holding and movement.**

### Accountability

**With the collaboration of analysis fields and extensive reporting facilities MEDI-365 is capable of tracking stock movement through various predefined cost centres.**

**SAVE TIME & MONEY**

## AN AUTOMATED APPROACH.....

### **Why MEDI 365?**

**Current storage facilities for medicines and supplies in some hospitals are antiquated and basically have changed little over the past few years. Processes for ordering and supply are in some cases inefficient and labour intensive. There are quite a few operational and logistical difficulties in dispensing medicines for a wide range of usage within hospitals. Access to medicine cupboards is usually key controlled and is very often a source of delay. Audit trails are inadequate in some hospitals. There is much evidence to suggest that automation within the pharmacy helps pharmacy staff deliver better services to both patients and other healthcare professionals and can result in genuine cost savings being made.**

**Marked reduction in dose acquisition time can be achieved - no keys, easy to locate drugs and medicines and less likely to be out of stock. High end-user satisfaction - nursing and medical staff have very positive opinions when operating MEDI-365. Enhanced stock management - reduction in returns and stock levels and therefore reduced expenditure on medicines. Time is saved counting and date checking medicine stocks. Improved utilisation of staff - nursing staff are released to clinical care.**

- **Full Inventory Control on stock medication.**
- **Total control of Expiry Dates.**
- **Improved management of prescribed TTO Packs.**
- **Secure Access for Authorised Personnel only**
- **Significant Reductions in restocking processes**

## TAKE CONTROL .....

- + Maximise Security Levels**
  - + Automated Ordering System**
  - + Minimize Dispensing Errors**
  - + Increase Process Efficiency**
  - + Real Time Analysis**
    - + Modular Flexible Design**
    - + Total Global Visibility**
